NHBA Analyst Meeting 10/18

- Progress on the Week
    - Alex: Provide updates and process of joining (go through Quarto document)
    - Joel: Talk about cleaning process
    - Sabrina (if started): Talk about visualizations
- Tabling Sabrina's task last week and moving it to this week
- Git Pushing
    - Write access?
    - Figuring this out with Tate
    - Joel -> pull request (show others how to do this)
        - git add .
        - git commit -m "[empty message]"
        - git pull origin main
        - git push origin <branch_name>
- Required Tasks (ALL DUE NEXT SUNDAY)
    - SABRINA -> Create species trend plots (5+ species)
        - Have nice formatting, one that is presentable for the client
        - Chapel Hill, Durham (NOT Jordan Lake)
            - 4 total per species (CH Spring, CH Winter, Durham Spring, Durham Winter)
        - Also have EDA (good writing)
    - JOEL - Compare bird counts across locations
        - Select 5+ species across datasets (Chapel Hill, Durham, Jordan Lake) and compare their counts
        - Have nice formatting, one that is presentable for the client
        - Also have EDA (good writing)
    - ALEX - Comb through dataset and find unusual observations, errors, and confounding variables
        - More qualitative work
        - Confounding factors to control for: Counting effort (e.g., birds per party hour, weather, and observer count changes year-to-year)
        - Write a written report of these observations
            - Ex: Data in X year might be off due to Y weather event
        - Change durham_spring_final NA values to 0
- SSMU Final Presentation
    - Still deciding date, but could be around Thanksgiving (Week of 11/30)
- Upcoming Meetings
    - Tuesday, 10/27 with Client (5:30PM)
    - Next Sunday (11/1)

NOTE: After the client meeting on 10/27, there are possible changes to the tasks and progress of the project, so everything here is subject to that.
